I am writing to apply for software engineer position that was listed on CyHire and your website. I was recommended to apply after meeting with your company at the Iowa State Career Fair. I was also recommended to apply by my former roommate, who was an employee at Kingland, Neil Cashin.

I have roughly six years of experience programming in various languages such as Java, C, Python, and others. Three of those years include my already completed time at Iowa State University studying software engineering. I am now in my fourth and final year of working toward my bachelor's degree in software engineering.

Through the course of both high school and college, I have worked on a variety of projects giving me many skills that can be valuable in this position. These include the ability to work in varied group sizes to effectively collaborate in the various aspects of the software development process such as: assessing a projects requirements, designing the implementation and solution, development, testing, and maintenance. Some of these projects were very data centric as one revolved around the gathering of large data sets which then had to be analyzed by some basic machine learning processes in Jupyter Notebook.

I believe I would be a valuable employee in your company. It will be an excellent way to utilize my skills that I have been developing while assisting your company to accomplish its tasks to reinvent the way companies manage risk, compliance, and data.

I hope to hear from you soon.

Thank you for your consideration.

Sincerely,

Matthew G. Hoskins
