I am writing to apply for the software engineering internship that was listed on LinkedIn.

I have roughly five years of experience in programming object-oriented projects in both individual and team based situations. I am currently in my third year of a software engineering bachelors degree in which I have been working on the development and testing of many different types of programs building a solid base in product testing and evaluation.

As of this semester, I have been working with Linux and low-level software relating to operating system. Building upon my more practiced skills of high-end software development and subsequent testing.

Through the course of both high school and college, I have worked on a variety of group based projects giving me the ability and experience to work with a team to efficiently arrive at a working product. This also gave me practice in having good technical communication skills that could help facilitate the development process.

I believe I would be a valuable employee in your Quantum Data team. And it will be an excellent opportunity to increase my skill in creating well tested programs while assisting your team in its goals to create leading edge test and measuring products.

I hope to hear from you soon.

Thank you for your consideration.

Sincerely,

Matthew G. Hoskins
