I am writing to apply for the data engineering internship that was listed on LinkedIn.

I have roughly five years of experience in programming object-oriented projects in both individual and team based situations. I am currently in my third year of a software engineering bachelor's degree in which I have been working on the development and testing of many different types of programs building a solid base in algorithmic and data structure creation and testing.

As of this last year, I have been working with basic data base management utilizing various SQL techniques and practices. Building upon my more practiced skills of high-end object oriented programming. This last semester has also enabled me to be working on low-level Linux software – specifically relating to operating systems.

Through the course of both high school and college, I have worked on a variety of group based projects giving me the ability and experience to work with a team to efficiently arrive at a working product. This also gave me practice in having good technical communication skills that could help facilitate the development process.

I believe I would be a valuable employee working with your data engineers and scientists. As well as, an opportunity to increase my skill in data engineering while assisting your team to accomplish its tasks of analyzing, designing, coding, debugging, testing, documenting, and deploying changes to your system.

I hope to hear from you soon.

Thank you for your consideration.

Sincerely,

Matthew G. Hoskins
