I am writing to apply for the entry-level simulation/lab software engineering position that was listed on LinkedIn.

I have over five years of experience programming and have been working in various programming languages over that time period. This includes having been programming in Java and Python from the beginning, and C over the past few years. I have been studying the use of Linux and Linux commands while having been using Windows my entire technological career.

Through the course of both high school and college, I have worked on a variety of software projects that have given me a range of ability in the full development lifecycle of software. This includes projects where I have had to define requirements, design, implement, and testing of software in a variety of groups or on my own, and in a variety of programming languages and environments. Over this time I have also become an excellent time manager, and capable team member of any project I have been apart of.

I believe I would be a valuable employee on your team given my ability to learn, and developed skills. This opportunity will be beneficial in increasing my experience in using my capabilities while assisting your company to accomplish its goals to innovate and collaborate to make the world a better place.

I hope to hear from you soon.

Thank you for your consideration.

Sincerely,

Matthew G. Hoskins
